1100 112th Avenue NE, Suite 400
Bellevue, WA 98004

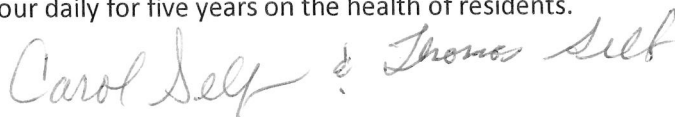

To whom it may concern:

We are owners and/or residents at Spinnaker Reach Condominium, which is situated at 444 S. State St., Bellingham, WA. Our property is on a bluff above Boulevard Park, and abuts the railroad property. We are concerned that the coal trains to and from the Gateway Pacific Terminal will impact the well-being of our property and of our residents if not mitigated, and ask that the following effects be assessed:

Vibration: We are located on a bluff that is partially composed of Chuckanut sandstone, which is subject to crumbling and easily broken. We have buildings and a swimming pool near the edge of the bluff, and we are concerned about the integrity of the ground beneath our property. We would like assessment of the thirty-year impact of vibration from passing coal trains on the integrity of the bluff within 500 feet of the tracks.

Diesel fumes and coal dust: Our residents live within 100 feet of the passing locomotives. We would like assessment of the impact of diesel particulates over five years, on the health of people, particularly of those under eighteen and over sixty-five years of age. These risks would include pulmonary and cardiovascular issues, including cancers, heart disease, and asthma. We would like a similar assessment of the impact of coal dust on long-term health, based on a realistic assessment of the amount of coal dust released in Bellingham.

Noise: We are situated between two unguarded crossings. Consequently, train horns blow within a hundred feet of residents' bedrooms. We are also within a mile of other points where the trains sound their horns on either side of us. We would like assessment of the impact of being awakened at least once an hour daily for five years on the health of residents.
